- deep-rooted
- intricate
- permanent
- devoted

30." The moving scene touched my heart." In this sentence, the adjective "moving" can be replaced by

- effectless
- ineffective
- emotional
- unemotional

#Read the following passage then answer:

When most people look at a painting of a sunset, they see a beautiful work of art. When Professor Christos Zerefos looks at a painting of a sunset, he sees valuable scientific evidence. He believes that these paintings contain important information about the effect of volcanoes on the climate.

Scientists know that after a volcanic eruption, sunsets are very red. This is caused by the dust and ash that are sent into the sky. Volcanoes also lower the temperature of the Earth.

Professor Zerefos and his team decided to study paintings of sunsets before and after volcanic eruptions. Red sunsets are a sign of polluted skies, so the scientists believed that landscapes that were painted after major volcanic eruptions would have bright red sunsets. They wanted to use the paintings to measure how the volcanoes had affected the climate in the past.

More than 500 water colours and oils of sunsets that were painted between the years 1500 and 1900 have been studied by a team of experts. Professor Zerefos

had the results analysed by a computer. The computer calculated the amount of red in each picture. They found that the sunsets that were painted after a volcanic eruption were bright red.

Many scientists are not convinced by this theory. According to them, it is impossible to make scientific conclusions based on art that was painted so long ago, because it is possible that the colours have changed since they were originally painted. What is more, artists often try to make something look very impressive when they paint. As a result, they may not always paint an accurate picture of nature.

Professor Zerefos disagrees. He is certain that artists accurately copy the actual colours of the sunsets they see. Paintings that were painted in the 20th century are now being studied by Professor Zerefos and his team. So the next time you look at a painting of a beautiful sunset, examine the colours more carefully.

33. What does Christos Zerefos see in a painting of a sunset?

- He sees the beauty of nature.
- He sees valuable scientific evidence.
- He sees nothing but red bright spots.
- He sees a frightening sight.

34. Why are sunsets very red after a volcanic eruption?

- Because a lot of dust and ash are sent into the sky.
- Because volcanoes are red.
- Because the painter made this in the picture.
- Because volcanoes are very hot.

35. How can volcanoes affect the earth's temperature?

- The Earth's temperature reaches zero°C.
- The Earth's temperature is high by volcanoes.
- They lower the Earth's temperature.
- The Earth's temperature reaches more than 100°C.

36. What do Red sunsets mean?

- They are burning.

- They have measles.
- There are clouds in front of them.
- They are a sign of polluted skies.

37. What did the landscapes painted after major volcanic eruptions have?

- They had bright red sunsets.
- They had 500 watercolours and oils.
- volcanic ashes.
- They had red lines on the face.

38. How was the computer used in Professor Zerefos' study?

- It was used to measure the painting.
- The computer was used to calculate the amount of red in each picture.
- It was used to test the volcano.
- It was used to paint another picture.

39. What is the best title for the passage?

- The sun and science
- The writer's opinion of the other artists
- There is more than just beauty in the painting of a landscape
- The effect of the volcano

40. The antonym of the word "valuable" is.

- invaluable
- precious
- priceless
- worthless
